

# **Ocean Acidification Impacts on Sea Surface Biology, Biogeochemistry and Climate Consortium**

## **Arctic Cruise – Summer 2012**

**Ray Leakey**

Scottish Association for Marine Science

# Arctic Cruise Objectives

- Dedicated cruise to Atlantic sector of Arctic during period of year with enhanced productivity and minimum sea-ice cover.
- To cover the ice edge region where strong changes in carbonate system occur due to winter respiration with prevention of water column CO<sub>2</sub> degassing resulting in a reduced pH.
- Post-melt enhanced primary production in meltwater-induced low salinity surface waters resulting in enhanced pH.
- Annually occurring coccolithophore blooms in the Barents Sea
- Saturation state ( $\Omega_{\text{CaCO}_3}$ ) gradients along N-S and E-W gradients (lower in Arctic sourced waters near Greenland).
- In situ physical, chemical and biological observations
- On-deck bioassay experiments examining response of in situ community to elevated CO<sub>2</sub>.

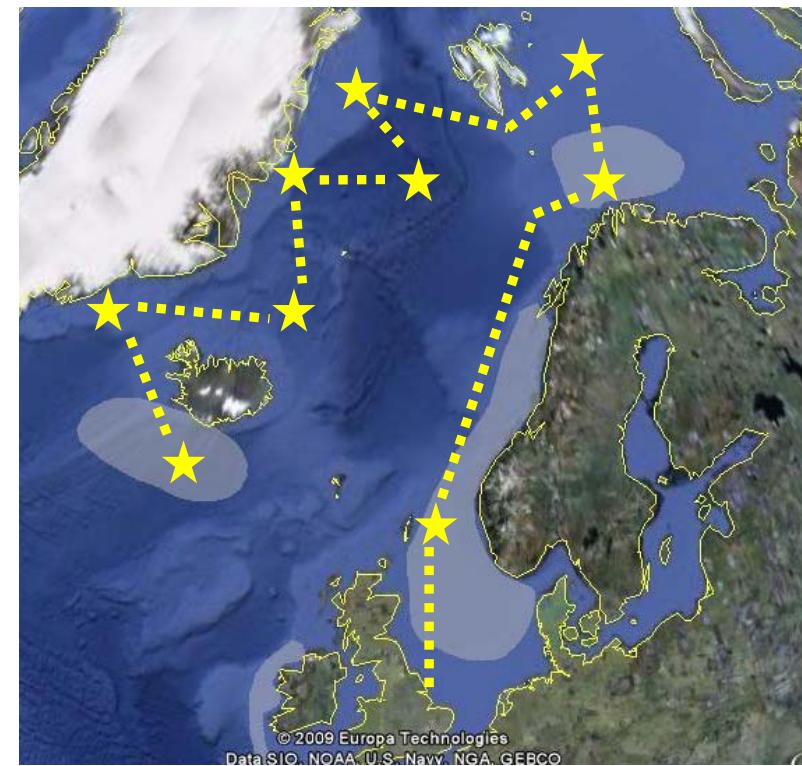

# Arctic Cruise Itinerary

North, Norwegian, Greenland and Icelandic Seas

RS *James Clark Ross* Cruise JR271

2 June to 5 July 2012 (33 Science Days)

# Science Plan and Study Sites

Priority stations are:

- Greenland Shelf to access true cold Arctic outflow water (ice-covered & MIZ)
- Barents Sea to access cold water coccolithophore bloom and E-W gradient
- North Sea station re-visit to give “shakedown” station and N-S gradient
- Iceland Basin to give low Fe waters

Limited in north by ice cover

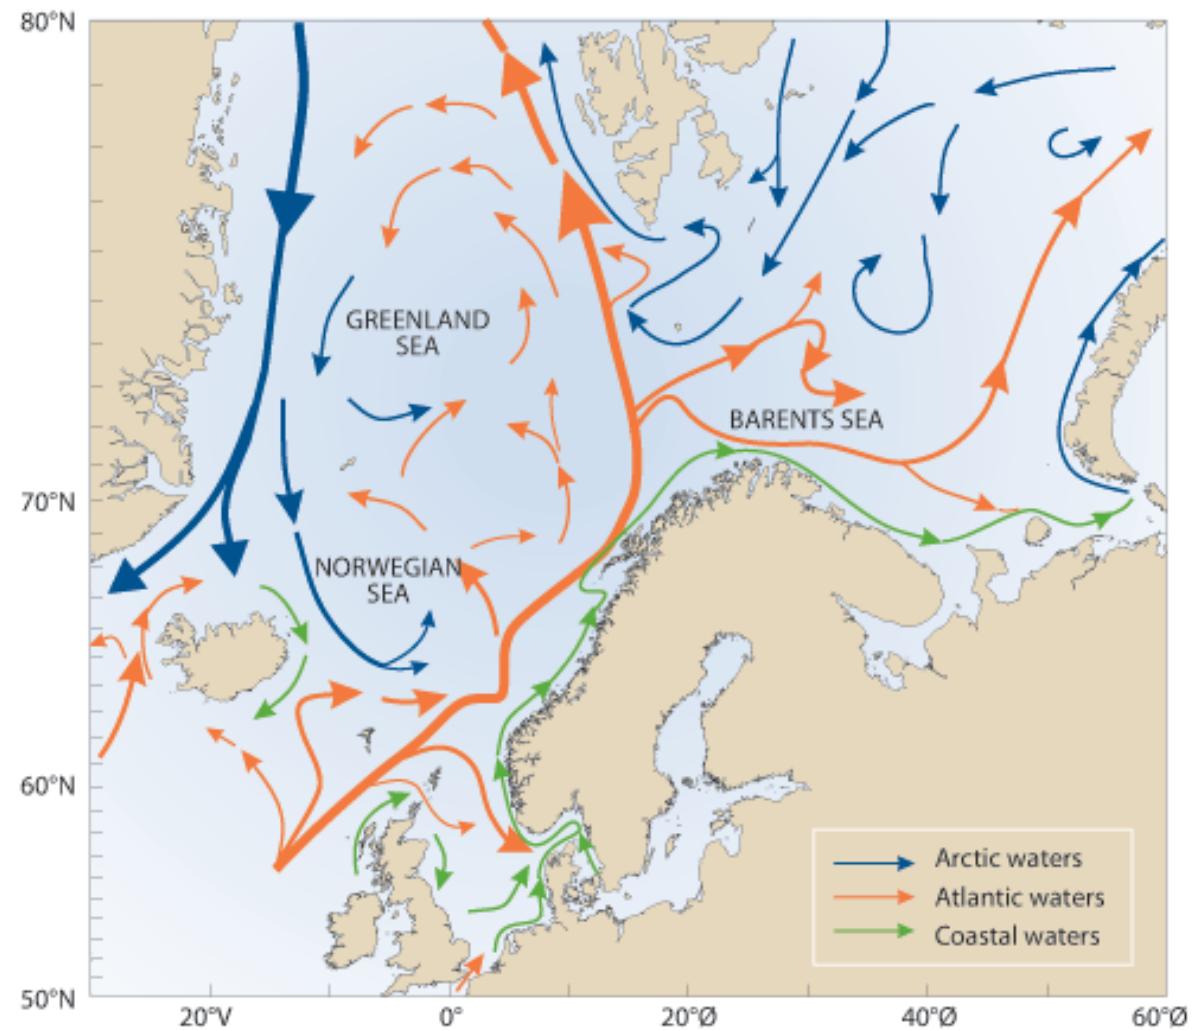

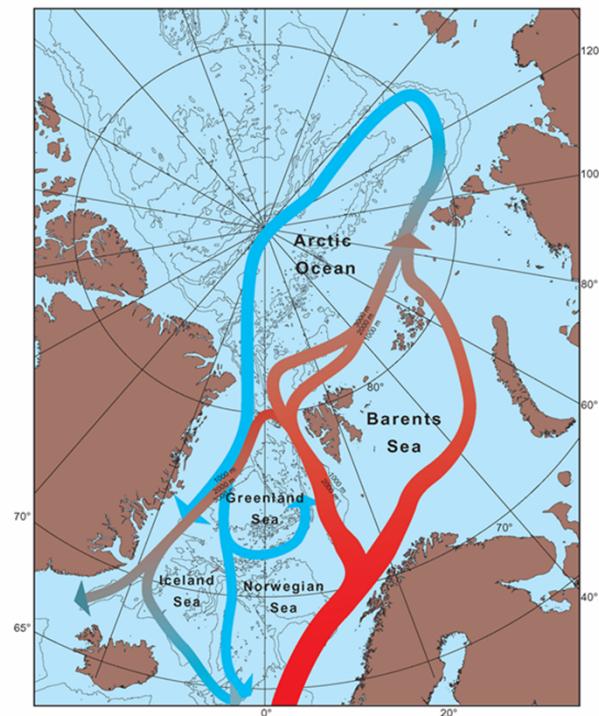

Limited in the Barents Sea by Russian waters at 38°E

Bioassays require 5 day cycle (4 days incubation + 1 day turnaround) so maximum of 6 main bioassay stations in 33 days

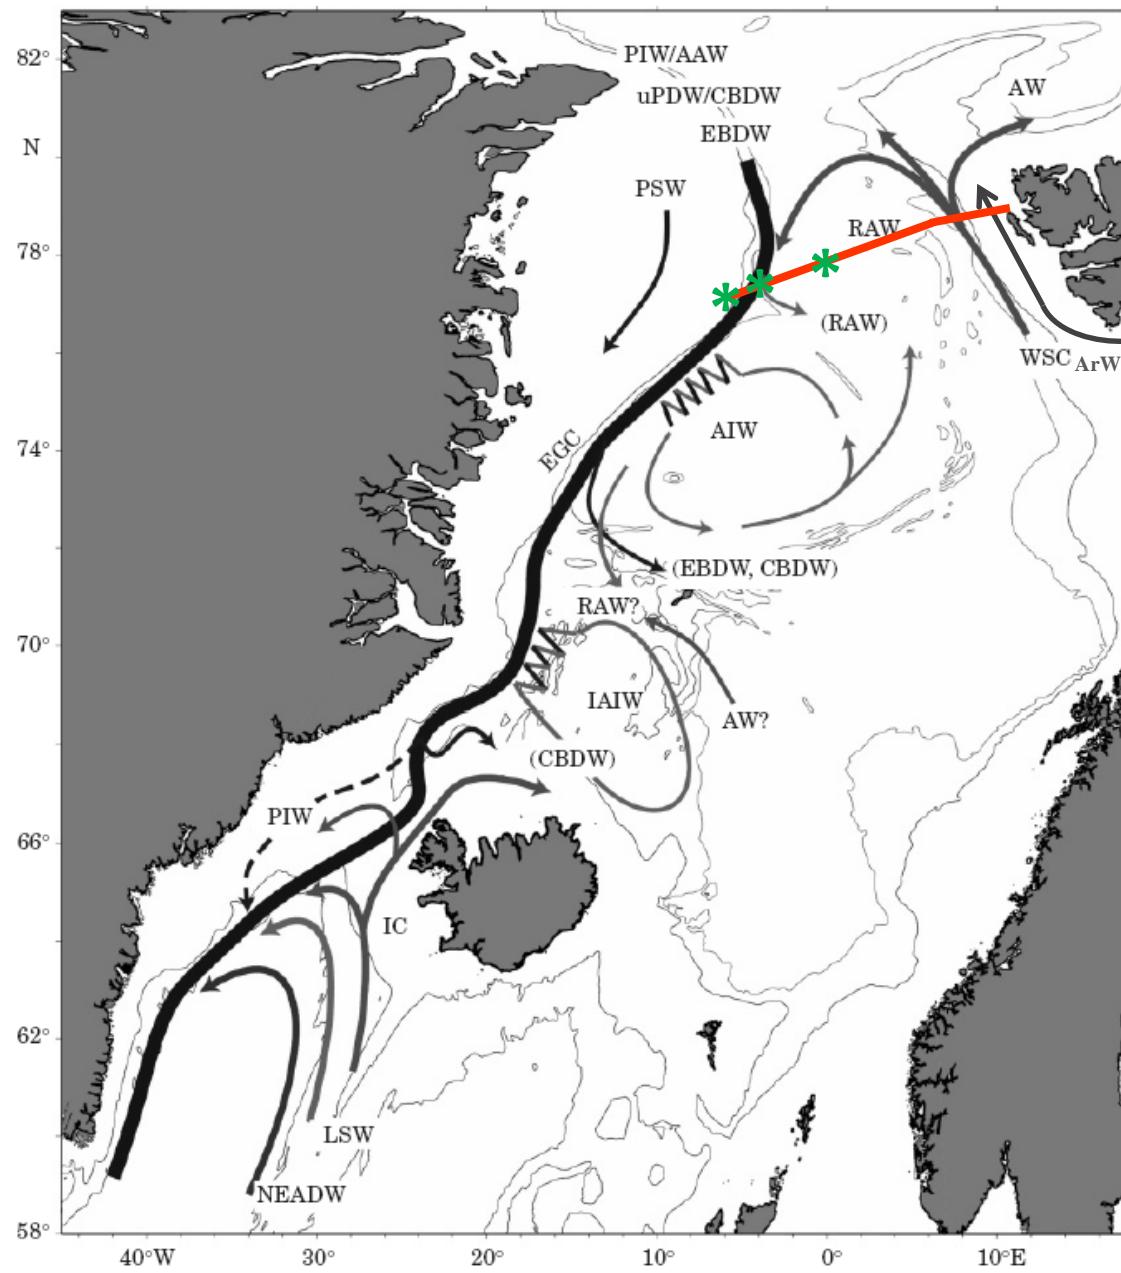

Distances between stations is short (e.g. 3 days from Barents Sea to Greenland Shelf) so ship will have spare time on and between stations.

Ice-cover will slow progress to access the Greenland Shelf or possible North Barents Sea station.

Ice Categories:

Fast Ice

Open Drift Ice: 4/10 - 7/10

Very Close Drift Ice: 9/10 - 10/10

Close Drift Ice: 7/10 - 9/10

Very Open Drift Ice: 1/10 - 4/10

Open Water: 0/10 - 1/10

! Sea surface temperatures will no longer be displayed on the icecharts. Take contact with the ice service for further info. !

# Arctic Cruise Sampling and Bioassay Design

## In situ observations/measurements:

- As for UKOA cruise but including microbial and zooplankton parameters

## On-deck bioassay experiments:

- Up to 6 assays each with 4 CO<sub>2</sub> treatments x 3 times x 3 replicates
- Analysis as for UKOA but including microbial and zooplankton parameters
- Trace metal clean

## Additional activities:

- Continuous plankton recorder tows
- Snowcatcher & thorium-234 work (investigation of OA impact on export fluxes)
- Deployment of Argo floats

# UKOA Arctic Cruise Participants
